

#### Custom-Built to Meet Specific Needs

Most military applications for large caliber weapons require a magazine for storing large quantities of linked ammunition, allowing the warfighter to rapidly fire the weapon without the need of a loader or constant monitoring of the weapon. Nobles Worldwide offers a wide range of ammunition magazines for every caliber to meet the diverse needs of troops in a variety of combat environments.

To ensure durability, our magazines are made out of aluminum and stainless steel or light weight composite materials. Typically, we custom-configure the magazine according to your requirements and specifications. Our designs are based on how many rounds of ammo it needs to hold, what type of fastening arrangement is required and what your loading conditions demand. Whatever the shape, size and application, our design and engineering experts are ready and able to accommodate your needs.

Our magazines can be attached to Nobles feed chutes resulting in a complete ammunition feed system, or they can be purchased separately. Below are several examples of magazine and ammunition systems we have designed and developed for our customers.
